

# Best Practice in Fuel Efficiency Data

RINACube OPTIMUM

# Is your fleet really efficient?

---

- A ship might sail for months with a **rope accidentally tied around the propeller**, heavily impacting on the fuel consumption, **without the crew being aware**. Similarly, **hull and propeller fouling**, or the main engine needing cleaning and maintenance, can heavily **compromise** the ships' **energy performance**.
- **Interventions** to fix these and other comparable issues **can be costly** and need to be **accurately planned** taking into account the **ships' schedules** and **cost-benefits** of any initiative.

# Vessel Monitoring to Enhance Ship Performance

DATA  
COLLECTOR

- Navigation, Automation, Sensors
- Manual Input
- External Data

EFFICIENCY  
TARGETS

- Realtime Monitoring
- Traditional Methods
- Machine Learning

ANALYTICS &  
MONITORING

- Drydock Planning
- Intervention Analysis

# Propulsive Power Targets Computation

# BIG DATA USAGE

## Propulsion Targets Computation

### SHIP4

22° 15' 33.36" N 110° 0' 38.76" W

Sun, 12 Mar 2017 09:55:00 GMT

Route Planning  no

Route Explorer

Description	Value
Speed over ground	19.055 kn
Course over ground	0 °
Propulsive Power	23924 kW (-10% target)
Shaft RPM	n/a
ME Consumption	4.469 kg/h (-17% target)
ME SFOC	187 g/kWh (-7% target)

**TARGET:**  
Propulsive Power

### SHIP VARIABLES:

- Speed Trough Water
- Loading Condition (Displacement/Mid Draft)
- Trim

### ENVIRONMENTAL VARIABLES:

- Sea State
- Wind State
- Sea and Wind Relative Directions
- Water depth
- Water density

# Propulsive Power Prediction

## MACHINE LEARNING:

- Based on recorded data (at least 3 months, 5 minutes detail)
- Importance of dataset completeness
- Data previously analyzed and filtered

## PHYSICAL METHOD:

- Based on Ship Characteristics (Tank Tests, Open Water Propeller Diagram, ...)
- Model as by ISO 15016 / ITTC

# Degradation and Intervention Analysis

# DEGRADATION ANALYSIS

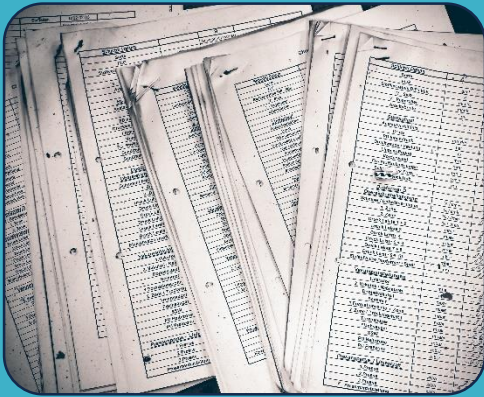

## Target & Measured Power

# INTERVENTION ANALYSIS

## Manual Input & Automatic Data Acquisition

## MANUAL INPUT

- Data retrieved once a day
- Prone to human error

## AUTOMATIC DATA ACQUISITION

- Data retrieved every 5 minutes
- No / limited human intervention

# INTERVENTION ANALYSIS

## Manual Input & Automatic Data Acquisition
