

# “Maritime Cybersecurity Rules of Thumb”

IONIC Shipping (Mgt) Inc.

Andreas Polidis  
*IT Advisor*

Keep the size of your infrastructure to  
the absolute needed,  
avoid implementing solutions and  
systems you don't really need.

Focus on your  
real needs

Choose vendors and solutions with high security standards and sign contracts which ensure these standards will always be up to date.

Choose the right vendor

EDR (*Endpoint Detection and Response*)  
should be a standard feature of your  
endpoint solution.

Encryption should always be considered when implementing an IT solution.

Always use MFA (*Multi Factor Authentication*),  
*where applicable,*  
*especially for VPN connections.*

IT and OT systems should always be updated based on vendor's recommendations.

Updates

Off-Site backup media should be managed by a certified external service provider.

Off-Site Media Management

*SOC (Security Operations Center) services should always be considered for a 24x7 monitoring and protection.*

Human error will “always”  
be the main root cause of  
a cyber attack.

Human Factor

Always think and act like your  
systems are under attack  
or will be.

You are or will be  
hacked

Thank You!
