

FORTINET®

Fortinet: Your link to the Star

Bill Nikolopoulos

Systems Engineering Manager Greece, Hungary and Cyprus

Lines and lines and lines

- Fleetbroadband < 1 Mbit
- VSAT < 20 Mbit
- STARLINK for Maritime
 - > 40 Mbit or above 200 Mbps
 - Plus a huge upload
- 4G/5G on-shore

The Good, the Bad and the Ugly

Of connectivity

- That leaves us with one option
- Secure SD-WAN

Why we ask for more ?

- More bandwidth ?
- Better quality ?
- Better price ?
- Connectivity is not about lines

Connectivity is just an enabler

- Think your Internet at about ADSL 384Kbps/128Kbps vs FTTH

What is Fortinet Secure SD-WAN ?

- Secure SD-WAN is a business enabler
- In the Age of Digital Transformation of your vessels

- And not about sending traffic left or right
 - Yes we still see competitive products pitching about traffic steering

What Fortinet Secure SD-WAN address ?

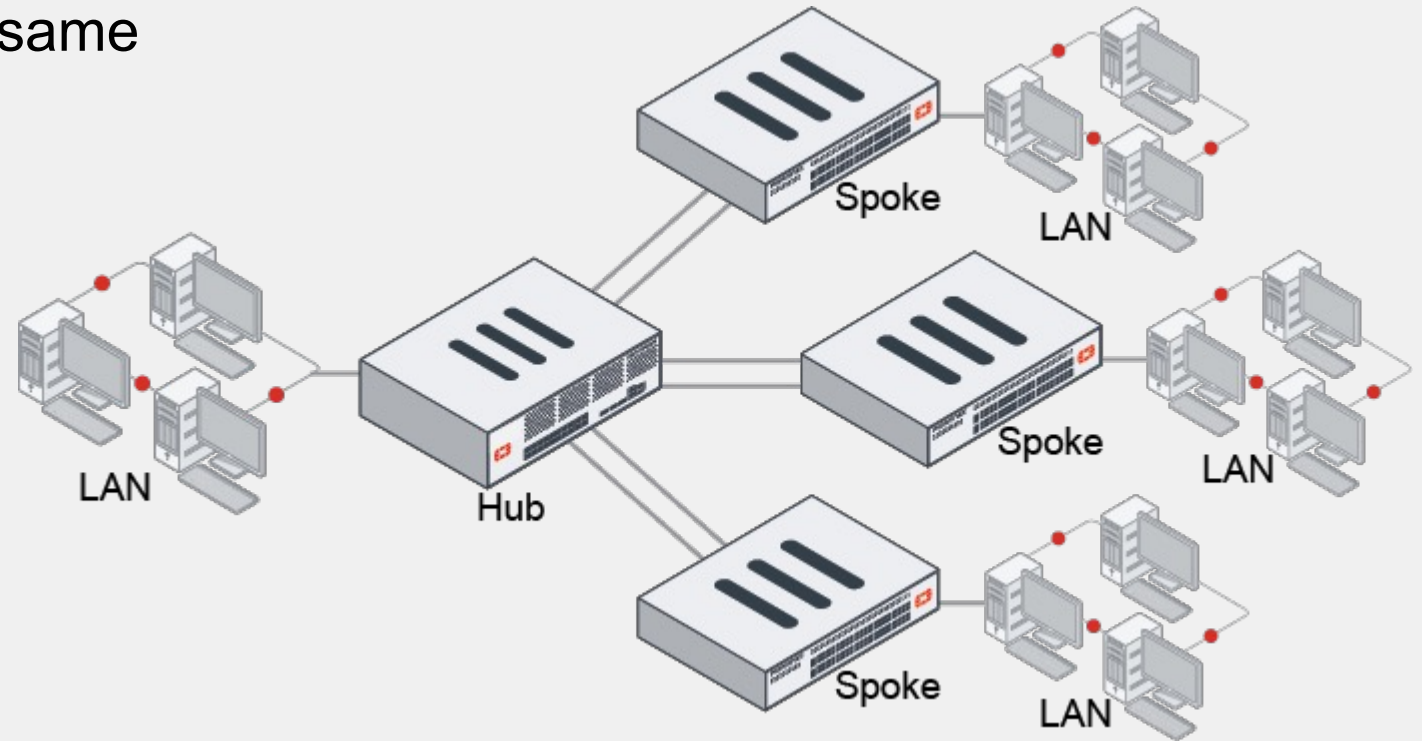

Just examples

- Direct Cloud Access
- Better application performance thanks to increased availability and agility
- Increased business agility
- Reduced cost with transport independence across Starlink, 4G/5G LTE, VSAT etc
- Reduced complexity with a single vendor and single-pane-of-glass management
- Optimized user experience and efficiency with SaaS and public cloud applications
- Vessel Performance Monitoring
 - Huge chapter

Why we are different ?

- Not all SD-WAN offerings are the same

Secure SD-WAN Five-Pillar Approach

These pillars together define and secure all available paths to all possible destinations

Their configuration does not change during regular operations and/or functioning of the network!

This is the **intelligence** that steers the actual traffic!

Underlay

Choose the WAN links to use

Overlay

Choose the desired topology to interconnect your sites

Routing

Choose how to propagate routes between your sites

Security

Choose how to protect each of the available paths

SD-WAN

Choose the strategy to pick one of the available paths

Why we are different ?

- Management
- Control, Data Plane, Security
- Network Access

Layer	Functions	Devices
Management and orchestration	<ul style="list-style-type: none">• Unified management• Template based solution• Zero touch provisioning• Logging, monitoring, and analysis• Automated orchestration using the REST API	FortiManager  FortiAnalyzer 
Control, data plane, and security	<ul style="list-style-type: none">• Consolidation of underlays and overlays into SD-WAN zones<ul style="list-style-type: none">• Underlay and Overlay• Scalable VPN solutions using ADVPN<ul style="list-style-type: none">• Overlay• Static and dynamic routing definition<ul style="list-style-type: none">• Routing• NGFW firewalling<ul style="list-style-type: none">• Security• SD-WAN health-checks and monitoring<ul style="list-style-type: none">• SD-WAN• Application-aware steering and intelligence<ul style="list-style-type: none">• SD-WAN	FortiGate 
Network access	<ul style="list-style-type: none">• Wired and wireless network segmentation• Built-in network access control	FortiSwitch  FortiAP 

How we will improve your security ?

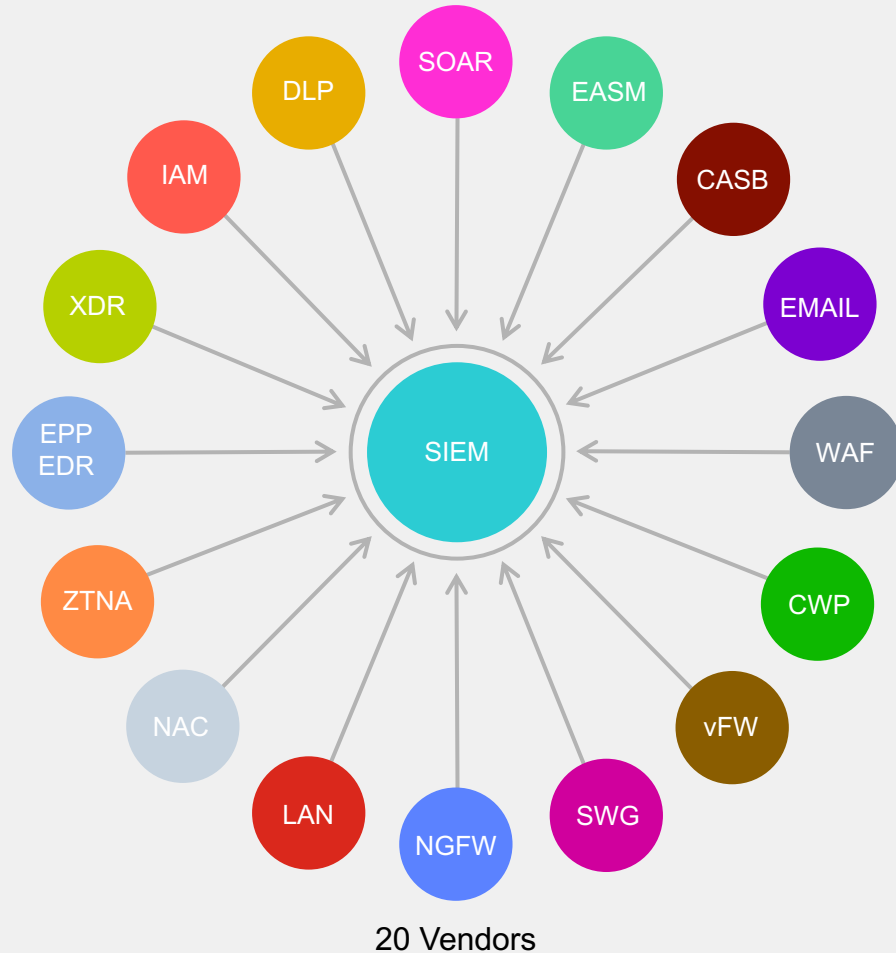

- Secure SD-WAN enabled more security
- Forget static methods
 - Like AV (without updates because of data costs)
 - EDR takes also advance of the cloud
- Real time threat analysis
 - GWs are up to date from Fortiguard Labs
- Sandbox
 - Patient zero protection
