

Introducing CyberOwl

Deep expertise in maritime sector

Award-winning technology

Finalist

Trusted by customers globally

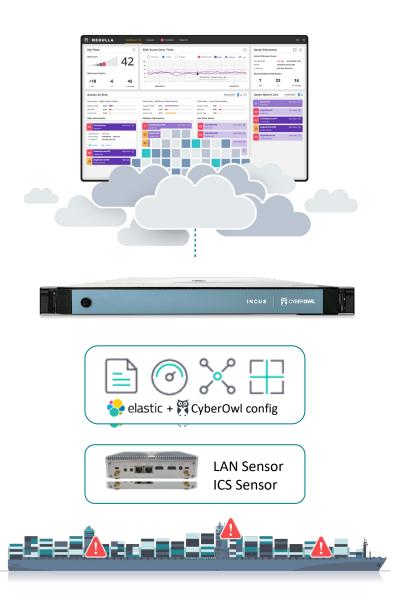

We help fleet operators

Know what you have onboard Keep it secure Prove you have secured it

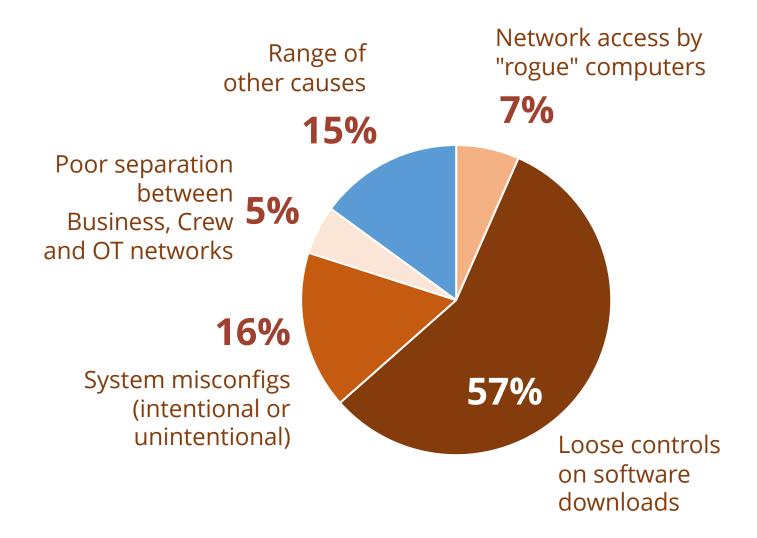

A typical fleet of 50 vessels experiences 70-80 cyber incidents a year

These risks link directly back to:

- Lack of visibility
- Poor implementation of controls
- Human error

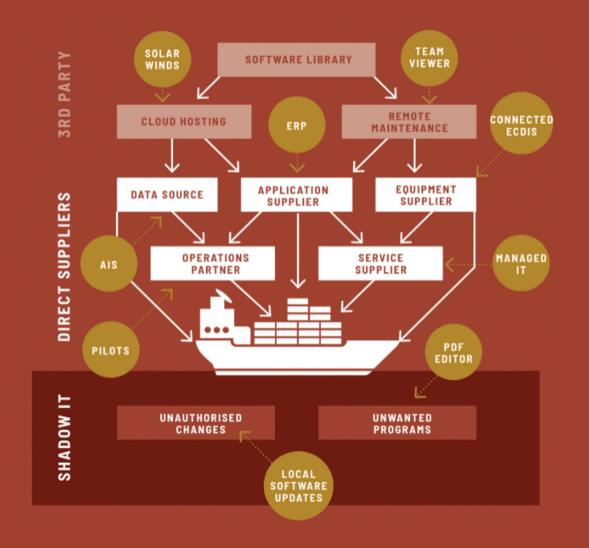

of vessel cyber incident response involve more than the IT team

85%

Seafarers do not conduct regular cyber exercises

92%

Shipping executives do not conduct regular cyber exercises

50%+

ships have 40-180 connected devices

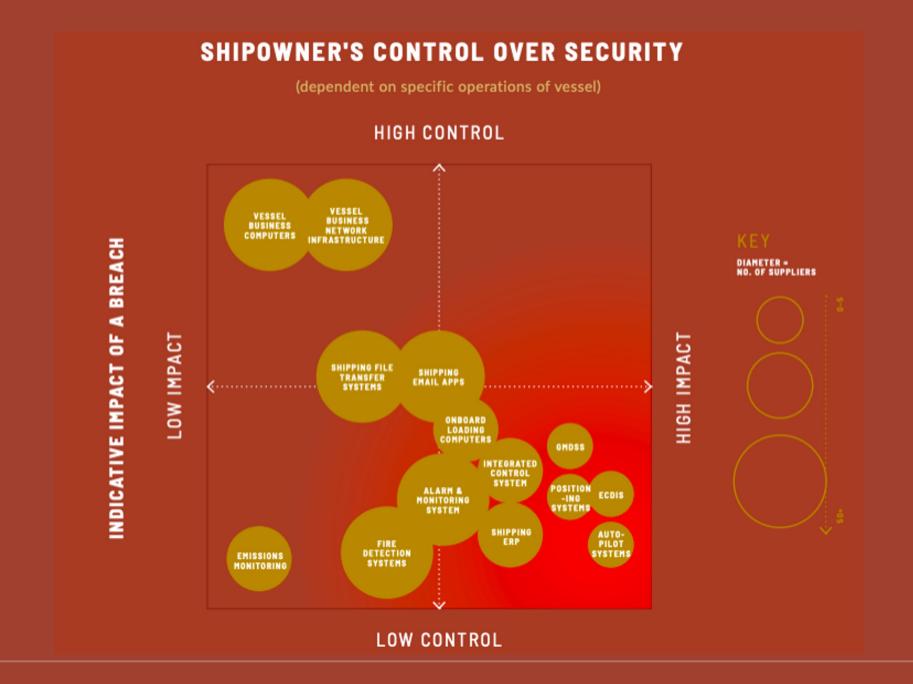

60%

onboard computers have unapproved software

30%

fleets give full local admin rights to crew

80%+

cyber incidents raised shortly after vessel leaves port

Shipping operators run cyber exercises with their key suppliers

- 2. Clarified roles and responsibilities
- 3. Assessed adequacy of procedures
- 4. Improved incident communication
- 5. Built muscle memory
- 6. Evaluated insurance needs

Some tips and tricks

1. Set objectives and corresponding metrics

2. A programme of exercise is better than one-offs

Exercising a tiered response structure

Bronze

TECHNICAL

Silver OPERATIONAL

Gold STRATEGIC

- Activated first
- Performs rapid technical assessment of the incident
- Exercise using tooling under pressure

- Activated first
- Conducts initial risk assessment
- Takes operational control of the incident and communication across response team

- Assumes overall command and strategic decision-making
- Considers wider business implications
- Handles external communication and media

3. Building the culture is everything

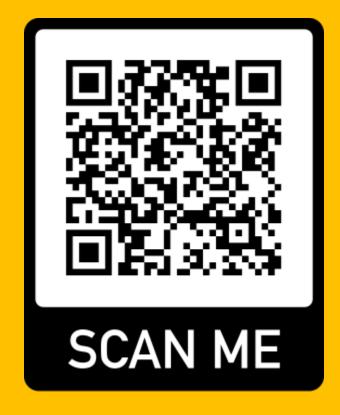

How do you work with your supply chain in a cyber incident?
