

An aerial, high-angle photograph of a large, white cargo ship with a long deck, sailing on a dark sea. The ship is oriented diagonally from the bottom-left towards the top-right. The name "WAGENBORG" is visible in red on the side of the hull. The entire image is overlaid with a semi-transparent red filter.

Accelerate digital transformation using Low Code

Arie Versluis – Royal Wagenborg

What is Low Code?

→ Low Code is like Technic Lego

Low Code is a software development approach that requires **little to no coding** to build applications and processes.

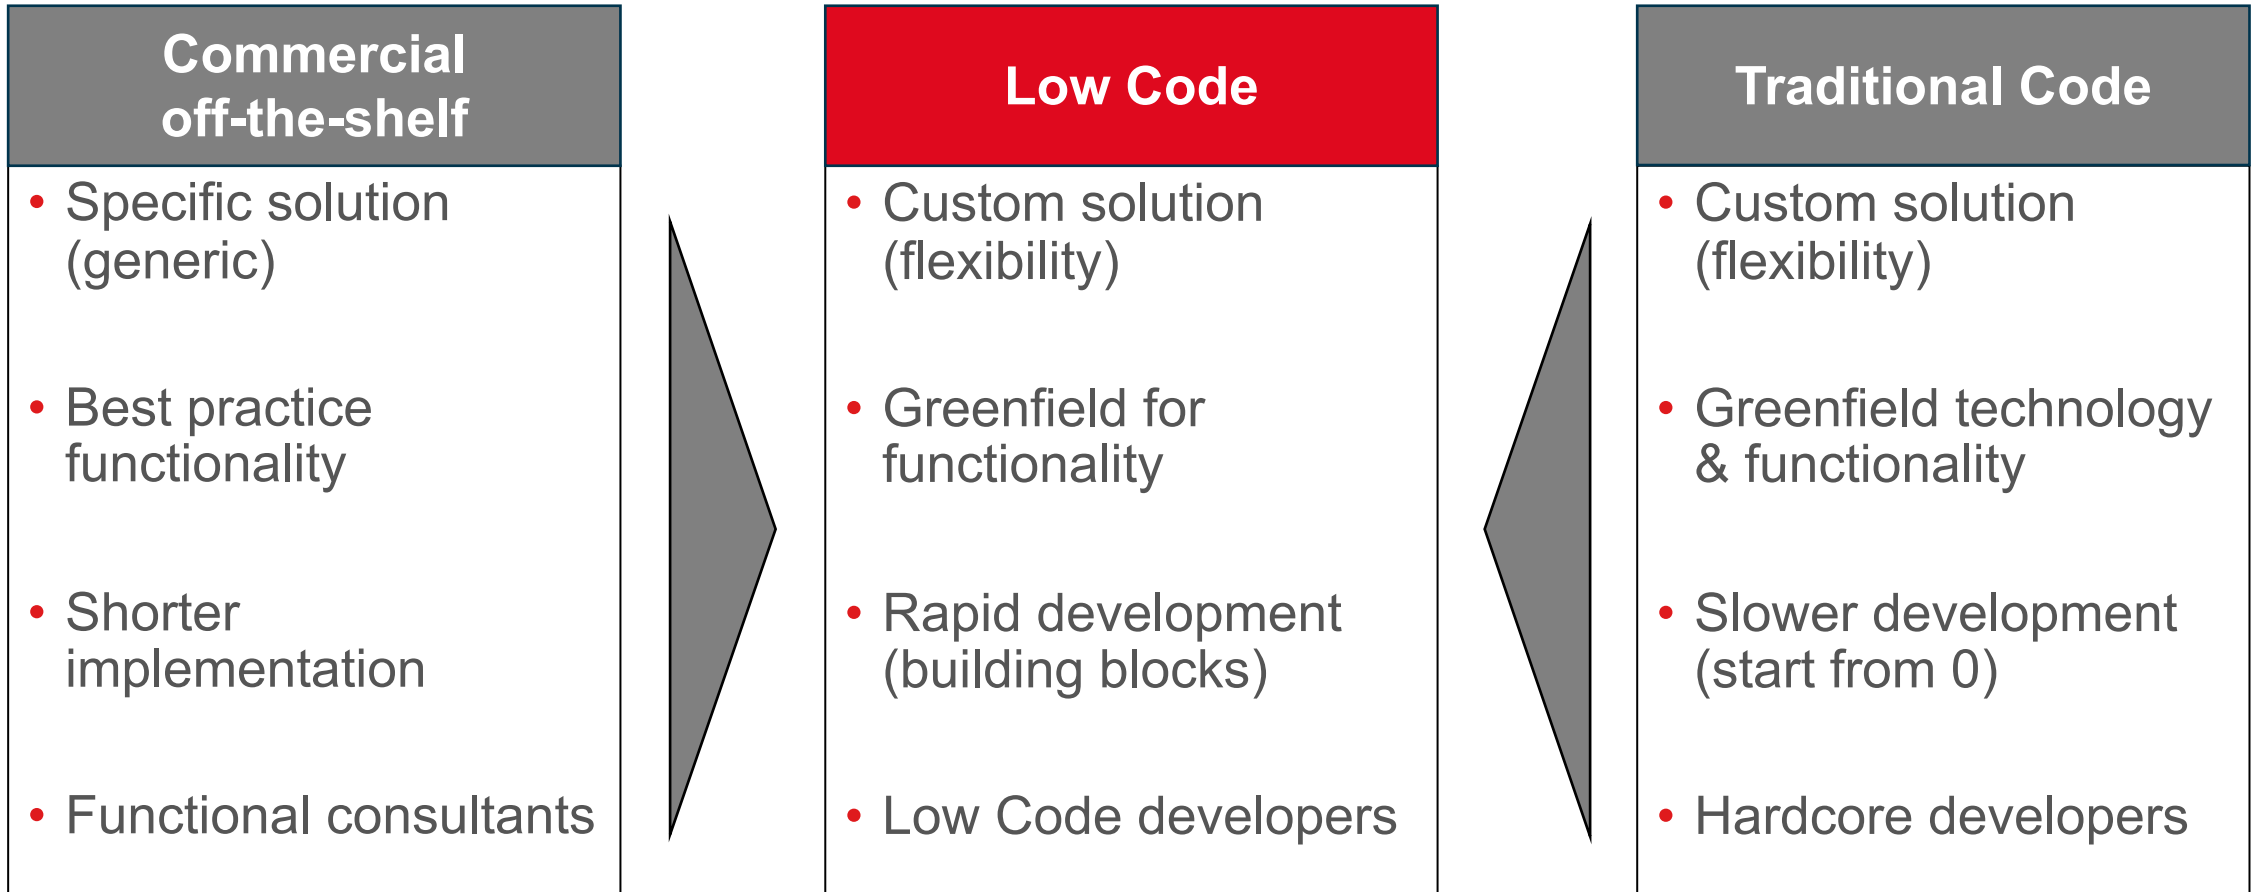

Low Code platforms allow its users to use **visual diagrams** and features like **drag and drop, connectors**, and properties to build **workflows**, create **entities**, build **relationships**, define **events** and **actions**, and **processes**.

The tool in the background writes **software**, creates **user interfaces**, **business logic**, and backend **databases**.

Market presence*
 The Forrester Wave™: Low-Code Development Platforms For Professional Developers, Q2 2021

Why Low Code?

What do we do with Low Code?

→ Connect Business & IT / Ship & Shore / Chartering & Fleet Management & Crew Management / Suppliers & Customers!

Systems of Innovation

- B2B Portals
- Integrations

Systems of Differentiation

- Unique combination of processes
- Smart Shipping

Systems of Record

- Master data
- Transactions

B2C / website

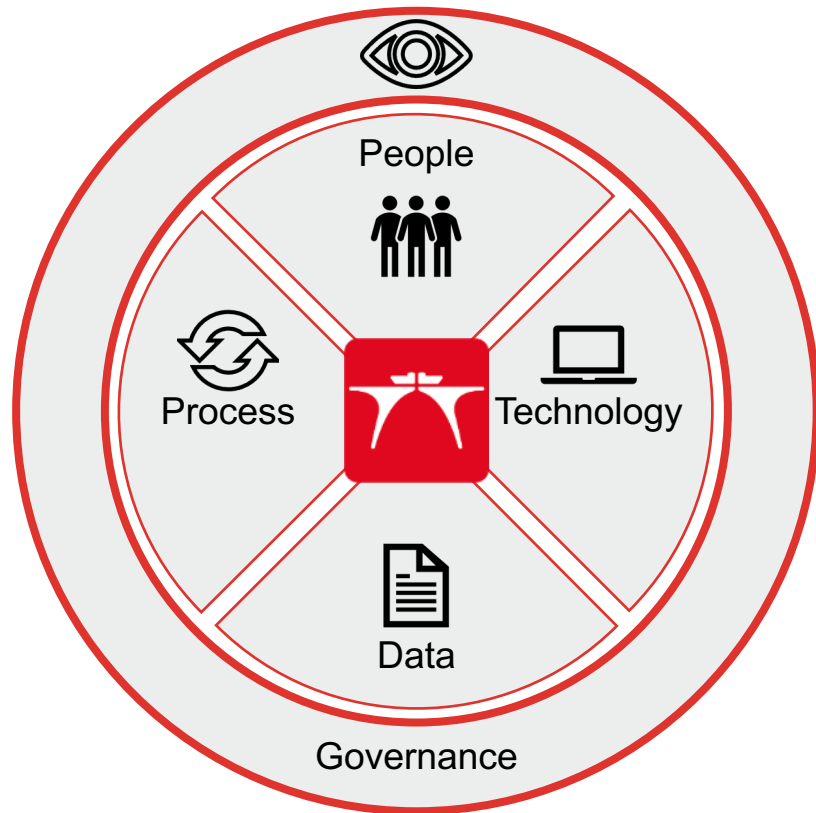

**think
wise.**

Accounting
/ Payroll

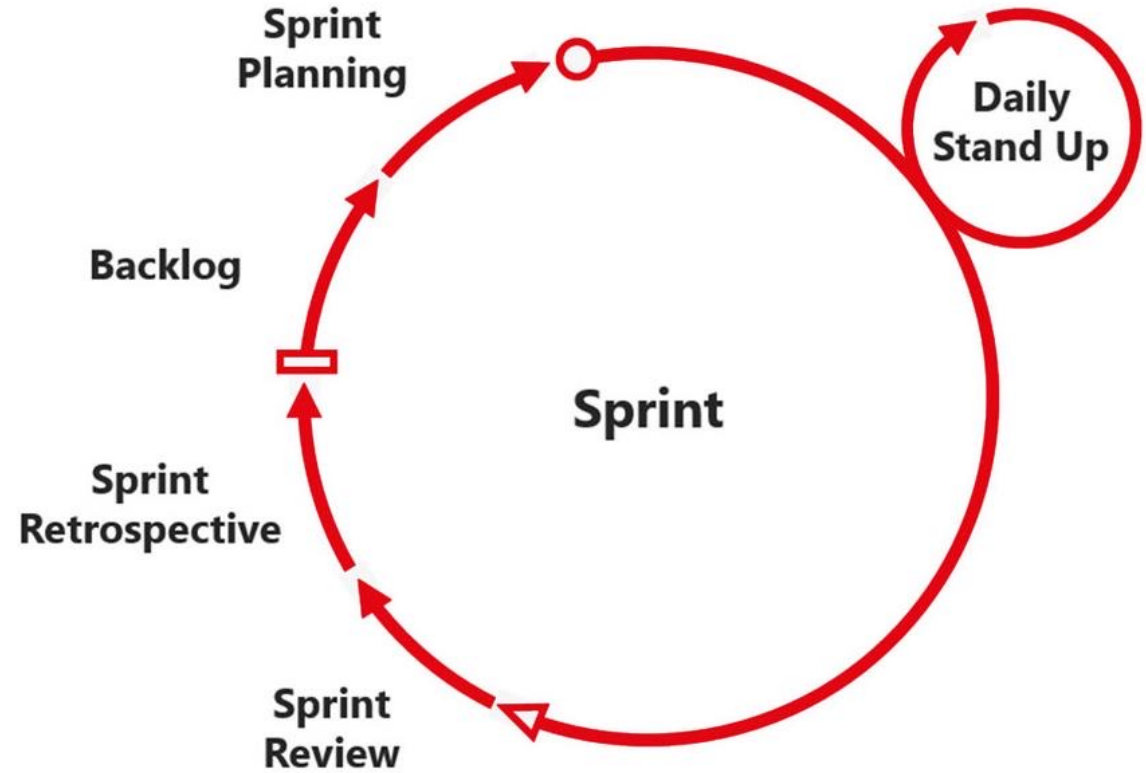

How do we do Low Code?

→ Digital Transformation

→ Agile Scrum methodology

What is the added value of Low Code?

- **Visual development:** less technical development expertise required, immediate feedback in User Interface
- **Flexibility:** iterative approach (1.0>1.1>1.2), easily adapt to changes, develop functionality for Wagenborg-optimized processes
- **Focus on functionality:** no time and cost spent on obsolete functionality, technology is responsibility of vendor
- **Improved Business & IT collaboration:** shorter development cycles & feedback loops
- **Automation & Integration:** Support for CI/CD & automated testing, fully in control of integrations

What are the challenges with Low Code?

- Low Code might be faster than Traditional code, but slower than Commercial off-the-Shelf
→ **Is it the best fit for your business challenge & do you have sufficient time?**
- No reference model / best practice → true greenfield implementation
→ **Do you have the people with analytic & soft skills (Business Analysts / Process owners) to determine & implement standard Processes & Data Model?**
- Proof of Concept is easy / Production-ready is hard (especially when replacing legacy)
→ **Do you have the grid to pull through & people with the ability to execute?**
- Citizen development & external consultants cause “Shadow IT” if not properly governed
→ **Who ‘owns’ the Low Code platform (Business or IT)?**

An aerial photograph of a large cargo ship, viewed from an elevated angle. The ship is primarily orange with white upper sections and has "WAGENBORG" written in large orange letters on its side. The ship is sailing on a body of water with a cracked, textured surface. The entire image is overlaid with a semi-transparent red filter.

Thank you for listening
