Resulting in an increased opportunity space

Hype or yesterday's news?

Connectivity is seen as a key strategic enabler

Odfjell cements deal with Marlink to support cloud-based digital strategy

Wednesday, 26 October 2022 | Communications & Cyber Security

Odfjell Management has signed a deal with Marlink to provide hybrid connectivity across 52 vessels and support Odfjell's cloud-based digital strategy.

Emerging solutions are becoming commercially viable

PRESSEMELDING - 13. OKTOBER 2022 12:17

Hurtigruten Expeditions først i verden med Starlink på alle skip

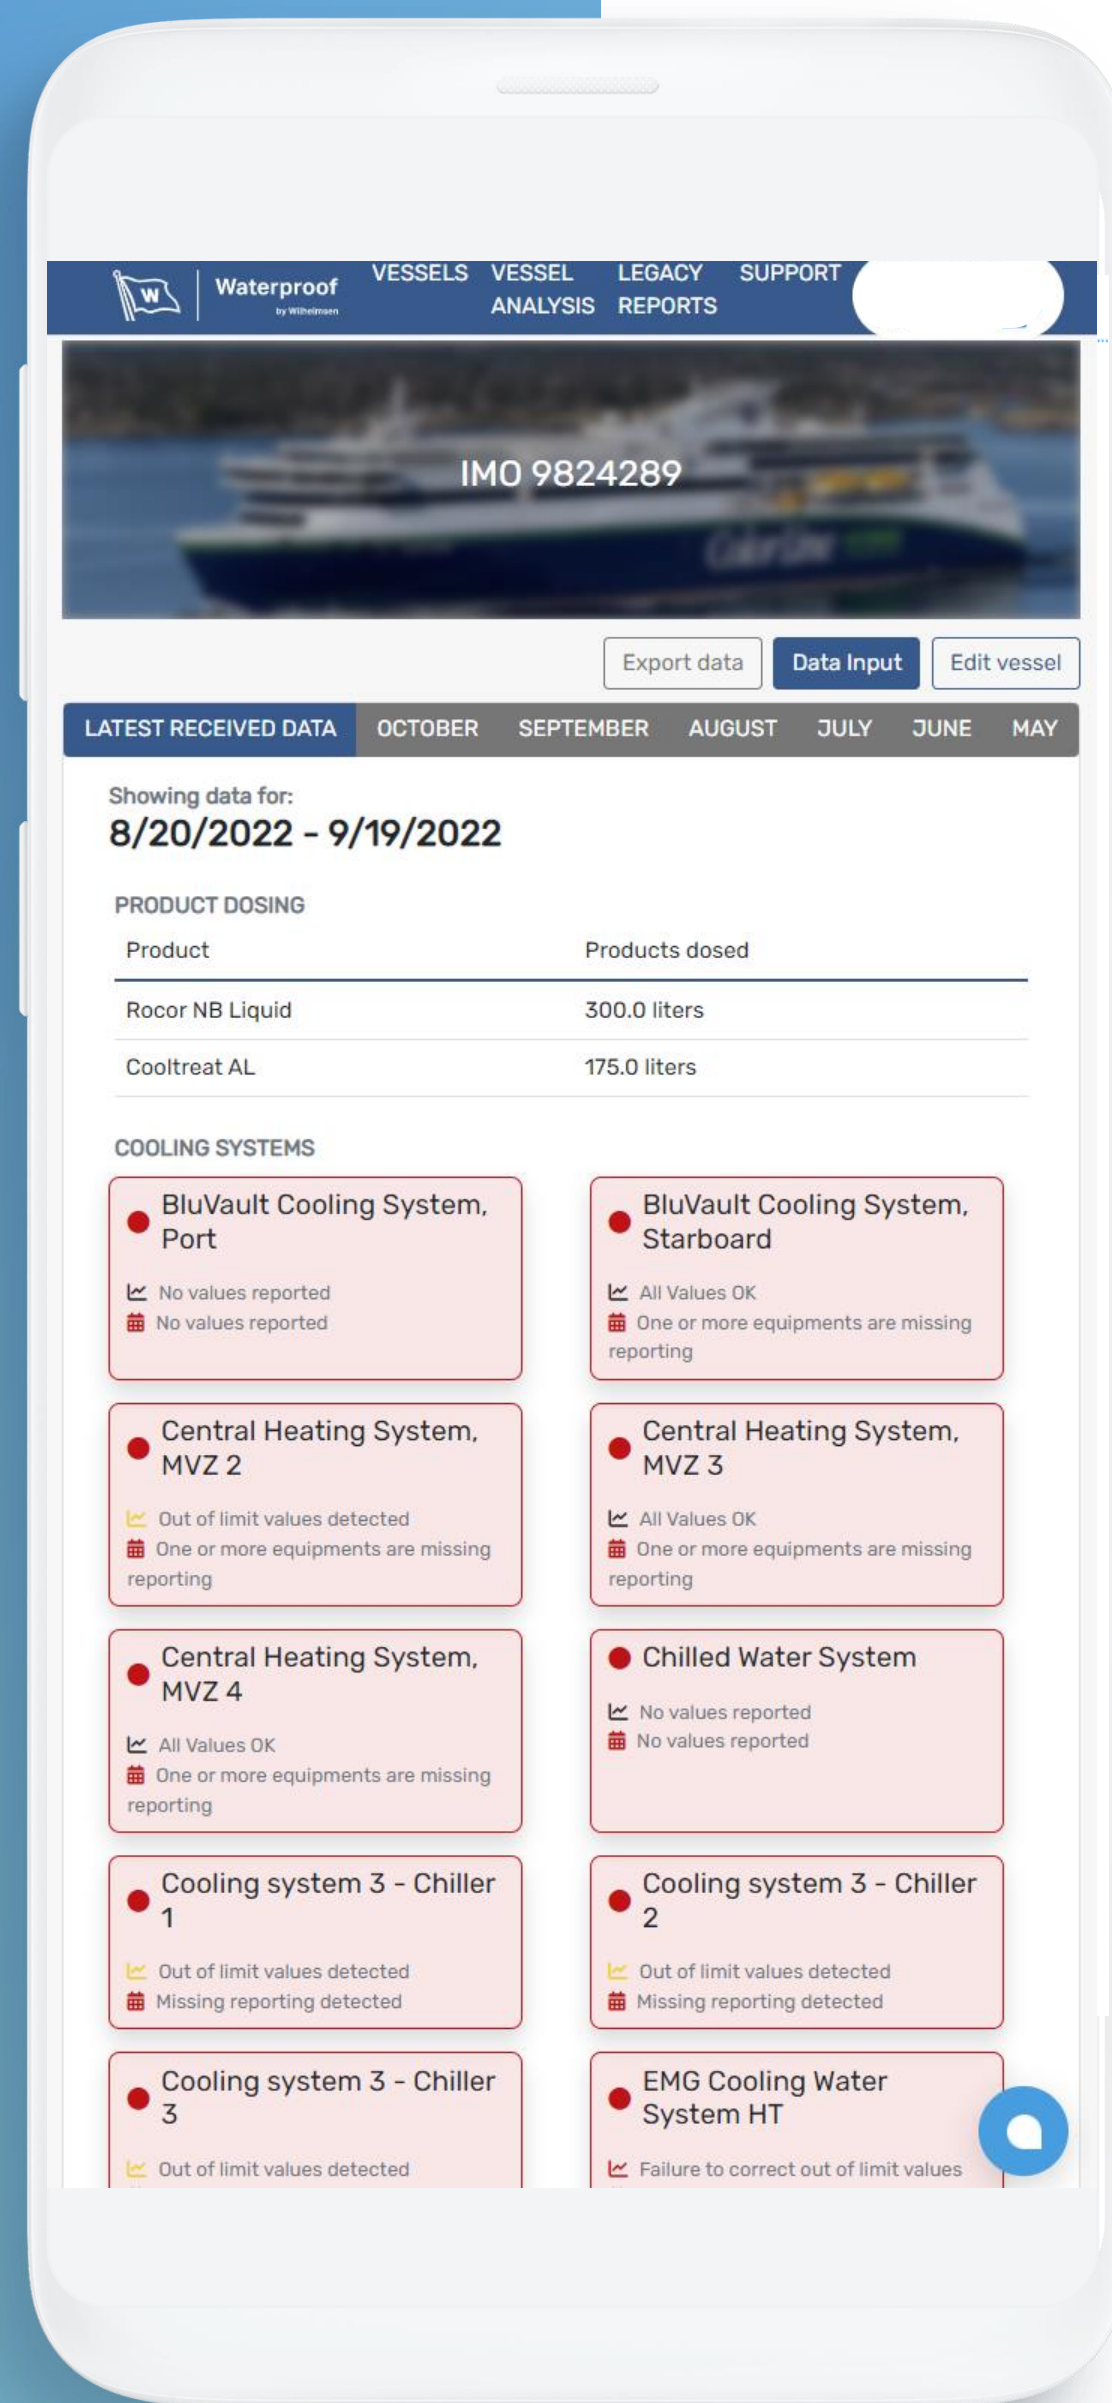

Hurtigruten Expeditions blir det første cruisereferiet i verden med den unike bredbåndstjenesten Starlink fra SpaceX på alle skip.

4

Updates to production from 2010-2021

44

Updates to production from 2021-2022

What is the one thing that changed?

- Client to cloud
- Software-as-s-service buisness model

We are in the mist of a perfect storm

The War for Digital Talent Has Begun

WIRED

THE WAR FOR DIGITAL TALENT HAS BEGUN

© lumaxart/Flickr

In the war for digital talent, one killer statistic stands out: an alarming 90% of companies lack digital skills. That statistic alone should spur even the most apathetic of organizations into action. However, many are not heeding the warning signs: only 46% of companies are investing in digital skills and only 4% of companies we interviewed are aligning their training efforts with their digital strategy. This is a surprising and worrying trend, particularly given that skills are so key to success in the new digital economy.

“We expect the fastest rise in the need for advanced IT and programming skills, which could grow as much as 90 percent between 2016 and 2030.”

McKinsey, 2018

...**90%** of companies lack digital skills...and only **46%** of companies are investing in digital skills

What are the constraints?

The Phoenix Project

The theory of constraints

All improvements other than on the constraint makes no difference

What are the main constraints to digitalization at your company?

This is us!

Improving Inspection Quality with Computer Vision and Deep Learning Technology

By utilizing advanced computer vision models, the LMP inspection tool will assist users on evaluating rope condition, resulting in safer, more reliable, and higher quality inspections.
